

Design for Commoning

Jaromil's Journal of Musings

2007

by Matt Ratto

It is important to recognise that the end goal of our work is not the creation of novel devices, new markets, or emergent forms of communicative activities. Instead, our goal is the development of a **generic information infrastructure** - and the tools and knowledge required to use, appropriate, rework, and innovate it.

We see such a resource, created, maintained, and owned by no one individual, institution, or company, as a necessary part of a **digital territory** in which a global, informed, and socially engaged citizenry has the potential to develop and grow.

Such a terrain is not just about the technology; equally important is the development of the **critical making** skills that allow this citizenry to engage with their information landscape, to make educated political and economic as well as technical decisions.

The coming decade worldwide will be determined by the *strained relationship between formal and informal structures and environments*. A **design for commoning** one that views **uncommon ground as a resource**, rather than a threat is the way towards living together locally in a globally connected world.
